

I want the FCC to really look at any interference issues involving BPL. We have enough interference in this world and do not need more. Make sure there is no problem with any electrical device that we are going to plug into an electric outlet. Weather it be a computer or tv or anything else. We need to make sure it will not interfere with hospital equipment. All I am saying is to make sure the technology is advanced and good enough so it does not cause any harm to anyone. Thank you for you time.
